

longlife coolants for wind turbines

proviflow Neo

the most reliable MEG based
fluid on the market

what makes an installation with proviflow glycol a gamechanger?

1

ASTM approved corrosion protection

Our heat transfer glycol includes anti-corrosion inhibitors providing a sturdy defense against glycol's #1 enemy, corrosion. All Proviflow fluids are tested to and exceed the ASTM D1384-05 corrosion test standard.

2

customized color

Proviron can deliver customized coloring. Red, blue, yellow, green, even your brand color. Contrasting the color of your HTF with your product can provide an effective way to detect leakage via visual inspection.

3

glycol analysis service

Periodic glycol analysis can prevent significant interruptions to production. In Proviron labs, we offer analysis services designed to identify issues before they become problems.
